

Whatever the weather,  
the outdoors is still yours.

# Atika

**umara**<sup>®</sup> by Llaza

More shade when you need it.

More freedom to choose.

More comfort with no effort.

More moments that last longer.

Create more moments to enjoy life outdoors, without limits.

The retractable roof transforms your space in seconds.

Open the roof and let natural light flood every corner. Close it whenever you need and enjoy shade, comfort and protection from wind and rain.

Atika is more than just a roof: it is the freedom to enjoy outdoor living your own way.

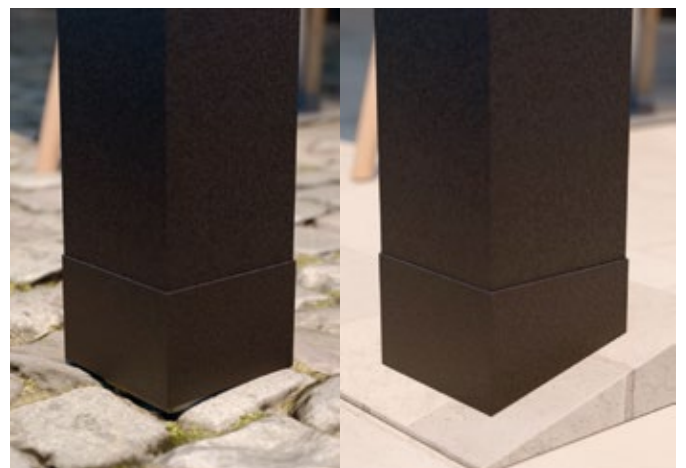

Atika creates an outdoor living space, perfectly balanced between functionality and atmosphere throughout the day. Integrated LED lighting within the roof itself creates a warm and welcoming ambience once night falls.

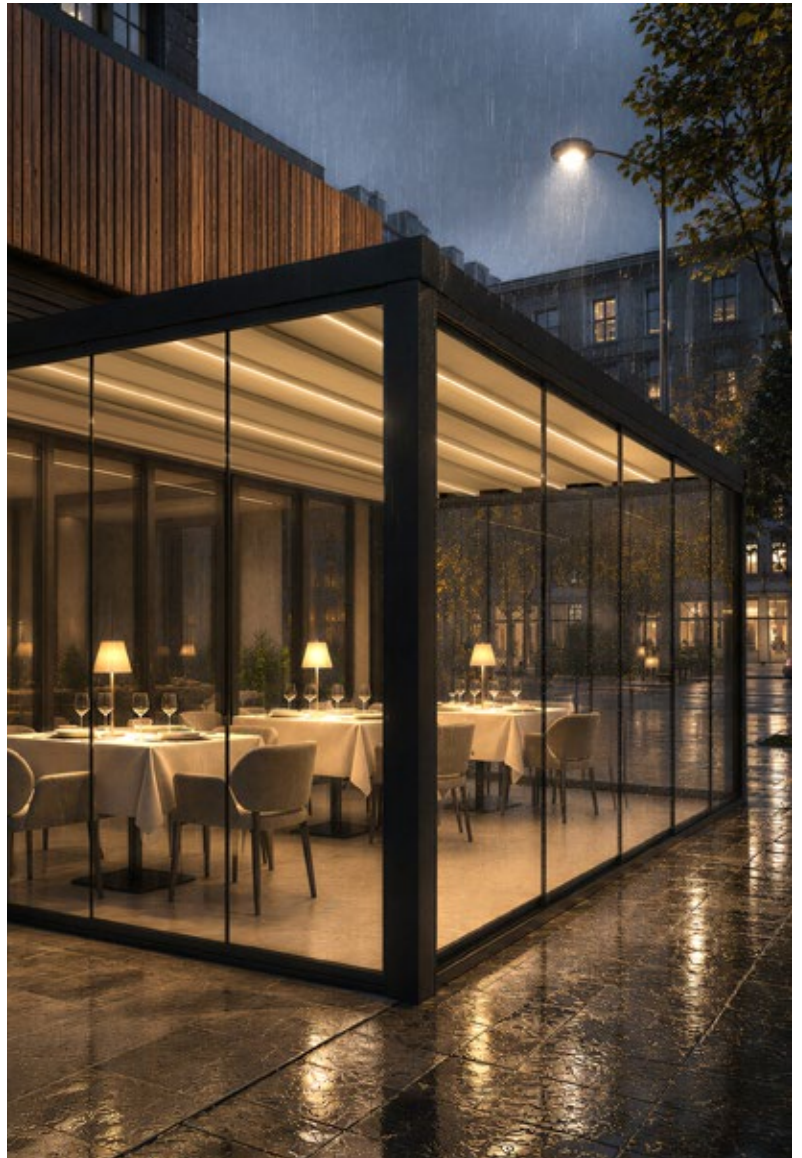

Harmony lies in the details.  
Its clean lines and the seamless  
integration of technical elements create  
an elegant and balanced aesthetic.

Nothing should stand between you and  
your moments..  
Atika adapts to the surroundings so every  
gathering feels exactly as you imagined it,  
without compromise.

When the rain arrives, everything flows naturally.  
Its drainage system channels water away cleanly and silently.

Designed to fit naturally into your space.  
Atika integrates effortlessly into any project.

Its modular system allows large continuous areas to be created, whether wall-mounted or freestanding, adapting to different layouts with complete versatility.

Outdoor living becomes effortless when everything works in harmony. Solar protection, thermal comfort and a constant feeling of wellbeing from morning through to night, all year round.

Clean design, a robust structure and details that make the difference. Atika combines visual lightness with exceptional strength, blending naturally into any setting while balancing aesthetics and functionality.

With a single movement, the roof opens to the sky or closes to provide shade and protection. Everything happens smoothly and silently, so all you need to think about is enjoying the moment.

When night falls, everything takes on a new light. The LED lighting creates a warm and immersive atmosphere that invites you to extend every moment, every conversation and every shared experience.

A space that opens up new possibilities.

When closed, a new experience begins..  
Atika becomes a refuge where comfort and protection allow you to keep enjoying every moment without limits.

Glass curtains and vertical blinds integrate naturally into the structure, creating an intimate, bright and welcoming environment designed for sharing, lingering and living every moment at your own pace.

Beauty, safety, innovation and versatility in a space where  
design and technology come together.

## BASIC TECHNICAL FEATURES

### MATERIALS

- Pergola with metal structure manufactured in aluminium and stainless steel.
- High-tenacity polyester fabric cover with a 4-layer opaque coating.

### INSTALLATION VERSATILITY AND PROTECTION

- Concealed installation details.
- Visual continuity between the front beam and optional side beams.
- Adjustable feet for levelling the pergola on uneven ground.
- Flexible positioning for intermediate pillars.

### FUNCTIONALITY

- Fully retractable tensioned roof operated conveniently by motor.
- Water is channelled through the roof into an integrated drainage system that protects the interior and evacuates water through the base of the columns.
- LED lighting (*warm or neutral light*). Integrated LED strip within the fabric-support profiles.
- Additional accessories:
  1. Folding glass side enclosure.
  2. Sliding glass side enclosure.
  3. Vertical screen fabric enclosure.

### DIMENSIONS

- Maximum dimensions per module: 5.00 m width x 10.00 m projection.
- Module connection for covering large areas.
- Up to 14.00 m width in 4-guide installations.
- Manufactured to the exact dimensions required for each installation.

### OPERATION

- Motorisation system housed within its metal casing. Protected and silent.
- Optional rain sensor.
- Operated via remote control, smartphone or voice control.

### FINISHES

- Premium finishes with concealed screws, cables and electronics.
- 100% metal covers and finishing trims.
- Powder coating and environmentally responsible lacquering system free from substances of very high concern.
- Wide range of colours available.
- Manufactured, machined and assembled in Spain.
