

Shade that multiplies
the space.
So do the moments.

Duox

Double-sided freestanding
awning

umara[®] by Llaza

The outdoors as a place to gather.

More shade for sharing moments together.

Coverage in two directions.

More ways to enjoy the outdoors.

An environment that invites you to stay.

Duox creates a gathering space where there
was once only open space.

Duox transforms open spaces into places designed for sharing. Where the sun once limited the possibilities, there is now a spacious, comfortable area full of opportunities.

Enjoy a space that adapts to the rhythm of the day and the way you want to experience it. Because when the space grows, everything else changes.

A system that doubles the shade and naturally expands the usable space. A generous canopy that creates spacious, balanced areas designed to be enjoyed without limits.

More space.

More comfort.

More moments to share.

Freestanding, Duox can be installed wherever you need it, without relying on façades or existing structures:

- In the middle of a terrace.
- In a garden.
- In any open space.

Because comfort knows no limits or boundaries.

Designed for open spaces, Duox provides a solid and stable structure that ensures safety in everyday use. So the only plan is to enjoy.

Duox is not just shade. It is a way to gain space, share it and transform any place into a meeting point.

As night falls, the space takes on a new atmosphere.

Integrated lighting allows you to continue enjoying the outdoors after sunset, creating the perfect excuse for moments to last a little longer.

Duox

Duox is a double-sided awning for terraces, gardens and hospitality spaces, creating large independent shaded areas on both sides. Designed for open spaces, it provides a versatile solution wherever there is no supporting façade.

Its freestanding structure combines stability, design and functionality to create comfortable spaces protected from the sun. Available with manual or motorised operation, it can include integrated LED lighting and is available with or without a fabric protection system to adapt to the requirements of each project.

Made in Europe

Manufactured, machined and assembled in Spain.
