

A roof of light.  
An unobstructed view  
of the sky.

# Tupak

Glass roof

**umara**<sup>®</sup> by Llaza

Day or night, always beneath the sky.

A space to enjoy all year round, regardless of the weather.

Light and wellbeing.

A transparent refuge where people can gather and share moments together.

Where natural light enhances every moment shared together.

Tupak transforms the outdoors into a refuge of light and comfort.

Tupak surrounds everything without enclosing it. The view remains open and uninterrupted beneath a true glass sky.

Here, rain does not interrupt the moment. It becomes part of the experience. The wind does not disturb. It stays outside.

It is the comfort of being protected while remaining connected to the outdoors. A refuge of light and comfort where interior and exterior come together.

The absence of horizontal profiles enhances transparency and creates a greater sense of freedom within a protected space. sensación de libertad dentro de un espacio seguro.

More clarity and transparency.  
More wellbeing.

A stronger connection with our  
surroundings.

Tupak's roof opens and closes  
effortlessly, with a smooth and  
natural movement that is almost  
imperceptible.

The system responds with precision,  
allowing each opening position to be  
adjusted according to the moment  
and stopped exactly where desired. As  
simple as pressing a button.

The glass provides protection without taking away from the connection with the outdoors. Light remains the main feature. And so does the space itself.

Everything is designed so that nothing gets in the way. Not the view. Not the moment.

Integrated LED lighting in the guides allows the space to be enjoyed even after night falls.

A light that accompanies without overwhelming, maintaining a comfortable and welcoming atmosphere.

Because when daylight fades, the landscape does not disappear. It simply takes on a new light.

# Tupak

Tupak is a retractable glass roof system for terraces, patios and hospitality spaces, providing protection from the elements while maintaining natural light. Designed to extend the use of outdoor spaces, it combines elegance, functionality and outstanding performance to create comfortable environments all year round.

Its clean design, without horizontal profiles, provides clearer views and a greater sense of spaciousness and continuity. Available with manual or motorised operation, it can incorporate optional LED lighting integrated into the guide profiles to create a warm and welcoming atmosphere.

## MOTOR

concealed in the rear section

## SLIDING ROOF

with silent-running rollers

## NO HORIZONTAL PROFILES

for improved visibility and more efficient drainage

## FULL METAL

side caps

## LED LIGHTING

integrated into the guide profiles

## PROTECTION AND WELLBEING

Natural light entry and use of solar heat in winter to help warm the interior.

### Made in Europe

Manufactured, machined and assembled in Spain.

### Powder coating

Powder coating with an environmentally responsible coating process.

## MATERIALS

### High-strength aluminium

Metal structure manufactured from steel and aluminium.

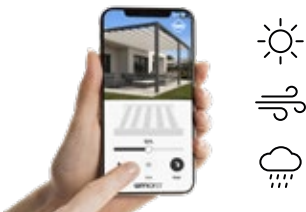

### Roof options according to requirements:

- Laminated glass
- Insulated glass
- Polycarbonate
- Sandwich panel

## OPERATING

Motorised operation or manual operation using a pole. It can be operated via remote control or smartphone, as well as through sun, wind or rain sensors.

## INSTALLATION VERSATILITY

WALL-MOUNTED

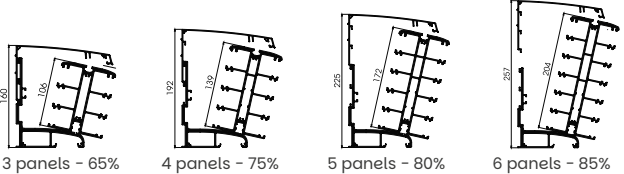

BETWEEN WALLS AND  
CEILING-MOUNTED

### Optional

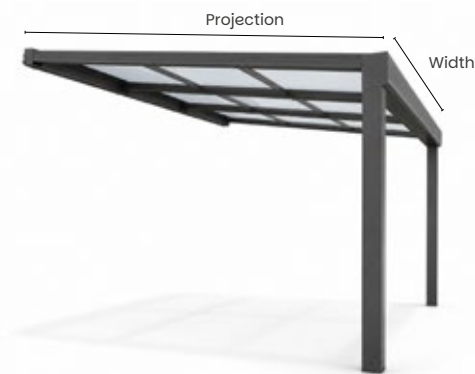

- Installed against a rear wall and one side wall
- Three walls
- Four walls

## OPENING

65-85% depending on the number of panels

## DIMENSIONS

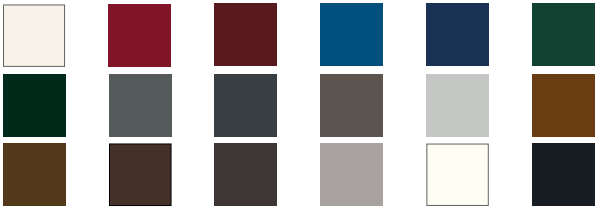

|     | Glass roof |        | Polycarbonate & sandwich panel |        |        |
|-----|------------|--------|--------------------------------|--------|--------|
|     | %          | Manual | Motor                          | Manual | Motor  |
